

REVIVE contains the essential bacteria and nutrients needed by all new septic systems, recently pumped tanks and mature tanks.

***Stops Odours!***

Regular use of REVIVE generates efficient and reliable waste digestion in slow running and older systems to help prolong the lifespan of septic systems. Helps ensure clean drains and tile beds. Protects against freezing. Eliminates odours and discourages flies. Assists digestion of toilet tissue, soaps and detergents. 100% biodegradable.

### **DIRECTIONS**

#### **RESIDENTIAL SEPTIC SYSTEMS**

For the first application flush 1 cup (120 g) of REVIVE down the toilet. Continue dosage with 1/2 cup (60 g) every two weeks. Continuing use of REVIVE and care not to introduce significant quantities of strong chemicals will ensure odour free operation of the system and freedom from blockages.

Larger tanks, in excess of 800 gallons (3000 litres), may require up to twice the amount depending on loading.

#### **COMMERCIAL SEPTIC SYSTEMS**

Use double the amounts shown above for residential systems.
